EXPERIENCE

Senior Software Engineer

Very Very Spaceship

02/2023 - 06/2025

- Achieved enhanced player experience for 122.5 million monthly users by overhauling avatar system within Pokémon Go.
- Ensured seamless workflow for artist team by developing baseline tools for content migration in Unity3D.
- Oversaw server deployment and automated testing for avatar system, delivering technical design and documentation for stakeholders.
- Represented the engineering team in cross-discipline meetings and took ownership of the avatar server as a product.
- Performed thorough code and technical design reviews and mentored engineers in best practices and scalability.

Senior Software Engineer

Smashing Ideas

06/2018 - 01/2023

- Developed scalable aerospace mechanics training simulations using C++ and Unity3D, facilitating compatibility across multiple airplane models.
- Created and managed version control systems, ensuring seamless integration and differentiation of code bases.
- Collaborated with stakeholders to gather requirements, demonstrate progress, and set achievable goals for project timelines and deliverables.
- Built an analytics logging system conforming to xAPI standards for existing Windows applications, enhancing data insights.
- Advised stakeholders on optimal data collection and visualization strategies for improved business intelligence.
- Coordinated with a publisher to develop a Game of Thrones companion app, featuring adaptive UI and extensive content management.
- Successfully ported an iOS-only product to support both iOS and Android platforms, incorporating Android-specific in-app purchases and device integration.

Unity Developer

VERGE OF BRILLIANCE LLC

01/2017 - 06/2018

- Complete final 10% of mobile platforming game iterating extensively upon artistic impact bringing project to ship-ready completion.
- Implemented in game store, tutorial and achievements screens.
- Improved combat mechanics of early hardware VR title.

Game Development Instructor

Circuit Stream

09/2017 - 05/2018

- Taught classes to adults looking to begin learning software development or expand upon their skills. In this position I planned lessons, taught group lessons and performed weekly one-on-ones with each of my students to progress their personal projects.

SUMMARY

Experienced Software Engineer with a strong background in Unity3D, C#, and C++ across mobile and gaming industries. Skilled in full-stack game development. Actively pushing to automate more processes in development. Aiming to join a dynamic studio to further drive technical excellence and innovative projects.

SKILLS

C#	C++	Java	Protobuf
RPC	Claude Code	Unity Engine	
Automated Testing		Telemetry	
Full Stack Development			Git
Tool Development		Unity3D	

EDUCATION

Advanced Diploma of Professional Game Development, Game Programming

Academy of Interactive Entertainment

- Founder and Chair - IGDA Student Chapter

VOLUNTEERING

Program Advisory Member

Sno-Isle Tech

09/2016 - Present

Advise game development and animation classes about current industry standards and direction for students. Review, grade and provide feedback to student projects.
