SUMMARY

Software Engineer with 8+ years shipping games across mobile, VR, and simulation platforms. Specialized in Unity3D and C#, with live service experience at massive scale. Experienced across client and server, skilled in technical design, end-to-end system ownership, and cross-discipline collaboration.

EXPERIENCE

Senior Software Engineer | *Very Very Spaceship*02/2023 – 06/2025

Shipped: Pokémon Go

- Shipped a complete overhaul of the avatar system for Pokémon Go, directly impacting the experience of **122.5 million monthly active users**
- Served as a go-to engineer for critical bug triage across the avatar system, rapidly diagnosing and resolving production issues in a live service at global scale
- Extended and maintained the Java-based authoritative server, defining Protobuf schemas for client-server communication and data serialization, and expanding test coverage to support the avatar system overhaul
- Built Unity3D content migration tooling in C# for the art team, streamlining artist workflows and reducing manual overhead during the avatar system rollout
- Led code and technical design reviews across the team, mentoring engineers on best practices, scalability, and system ownership
- Represented engineering in cross-discipline planning, translating technical constraints into production-ready decisions alongside design and art leads

Senior Software Engineer | *Smashing Ideas*06/2018 – 01/2023

Shipped: A World of Ice and Fire, Mindful Powers, Maintenance Synthetic Trainer

- Developed scalable aerospace mechanics training simulations in a C++ backend and Unity3D frontend, achieving compatibility across multiple aircraft models with game-quality real-time interactivity
- Built an analytics logging system in C# conforming to xAPI standards for existing Windows applications, enhancing data insights and enabling structured reporting across client platforms
- Successfully ported an iOS-only Unity product to iOS and Android, implementing Android-specific in-app purchases and native device integration using Java and C#
- Collaborated with external publishing team to develop A World of Ice and Fire in Unity3D, featuring adaptive UI and extensive content management systems built in C#
- Designed and implemented a data collection and analytics pipeline based on stakeholder requirements, translating business intelligence needs into a working technical solution
- Architected a Git branching and C++ friend class strategy enabling engineers to maintain shared and model-specific codebases across multiple concurrent aircraft variants without conflicts

Unity Developer | *Verge of Brilliance LLC*01/2017 – 06/2018

Shipped: Enter the Reveries, Epic Snowday Adventure

- Completed final 10% of a mobile platforming game, iterating extensively on visual polish and feel to bring the project to ship-ready completion
- Implemented in-game store, tutorial flow, and achievements screens
- Improved combat mechanics for an early hardware VR title

EDUCATION

Advanced Diploma of Professional Game Development, Game Programming • 2017

Academy of Interactive Entertainment • Founder and Chair, IGDA Student Chapter

VOLUNTEERING

Program Advisory Member | *Sno-Isle Tech*09/2016 – Present

- Advise game development and animation classes on current industry standards and direction
- Review, grade, and provide feedback on student projects
